

China Collapse Risk: International Briefing Summary

Executive Summary

China is undergoing a systemic multi-vector collapse - economically, socially, politically, and strategically. Advanced simulations using GPT and Gemini AI platforms have successfully predicted key events already unfolding. Urgent global attention and coordinated action are required to mitigate fallout.

1. Economic Collapse Indicators

- Real GDP > Nominal GDP (2024): Deflation trap
- Foreign direct investment down -89.5%
- Real estate sector in free fall: Evergrande liquidated, Country Garden pending
- Local government debt exceeds \$11 trillion (LGFVs)
- Consumer confidence collapse: Post-COVID recovery stalled

2. Social and Political Instability

- Labor protests doubled in 2023
- Civil servants unpaid for months
- Youth unemployment remains above 17.1%
- Expanded espionage laws suppress cooperation
- Military reshuffling suggests Xi's weakening control

3. Strategic and Global Risk Factors

- 90% of U.S. pharmaceuticals depend on Chinese APIs
- Critical mineral exports (gallium, germanium) restricted
- Arbitrary governance undermines foreign business confidence

4. Collapse Scenarios (12-24 Month Outlook)

Scenario 1: Urban Pandemic Collapse

- * COVID variant NB.1.8.1 spreads
- * Healthcare system overwhelmed, mass triage

China Collapse Risk: International Briefing Summary

- * City lockdowns and government paralysis

Scenario 2: Rural Rebellion

- * Wage defaults, food/water shortages
- * Spontaneous revolts, PLA refuses suppression
- * Rival factions exploit the crisis

5. Global Action Recommendations

- Revive vaccine R&D and deployment (Warp Speed Rev.2)
- Diversify API and critical resource supply chains
- Create contingency plans for Chinese economic failure
- Treat collapse as a live situation, not a forecast
